

General Purpose: For your belt sander to reach the finish line before the competitor's

One class for racing:

Stock

Stock sanders must be store bought unmodified sanders. They cannot have had any changes done that would affect the motors speed. They must use a standard store bought abrasive belt of any grit. No alteration to the belt is allowed. Stock sanders can (encouraged) be decorated and a guild system is allowed to help the sander go straight down the track. Keep in mind that any decorations should not drop below 2" from the track as they could interfere with the side rails. Sanders should be locked in the power "on" position.

Best Decorated

Decorating sanders is one of the highlights of every race event. All participants are encouraged to decorate their race entries in whatever way they want. Prizes should be given to best decorated. Make sure no decorations fall below the two-inch height of the side rails. Best-decorated winners are announced before the race starts.

Event Rules.

One person is identified as the "race official". In the event of any issues during the race event his/her word is final. Two "track officials" are responsible for assisting the placement of sanders at the start position and retrieving sanders at the end. They also act as judges at the finish line making decisions on winners of close races. In the event of a sander not being powered "on", entries have one false start opportunity for the entire race event. On the second false start the sander forfeits the race. Race events are structured on a double elimination bracket giving every entry at least two opportunities to race. No more than five (5) minutes are allowed between races for repairs, modifications, or any other changes--penalty is forfeiture of race. No new entries are allowed after first round of races are complete. Disputed races may be re-run at the discretion of the Rules Committee. Awards shall be determined by the Rules Committee. All decisions of the Rules Committee are Final!
